Analyzing data and interpreting a double line graph

A **double line graph** is used to show and compare information.

The Dolphins swim team and the Orca swim team each tried different ways to raise money during a seven-day period. The Dolphins sold raffle tickets. The Orcas washed cars. This double line graph shows their results.

Money Raised by Swim Teams

Use the double line graph to answer the questions.

O How much money did the Orcas earn in all? _____

4) How much money did the Dolphins earn in all? _____

~ Which team had earned less money by Thursday? _____

How much more did the other team earn by Thursday? _____

e) On what two days did the Dolphins make the most money? _____

How much did they earn on each of those days? _____

e On what two days did the Orcas make the least amount of money? _____

How much did they earn on each of those days? _____
